NOTICE TO AUTHORS

Re publication in the *Canadian Journal of Animal Science*, *Canadian Journal of Plant Science*, and *Canadian Journal of Soil Science* (Revised 1976)

GENERAL PUBLICATION POLICIES

Authors may publish in these Journals regardless of membership in the Agricultural Institute of Canada or its affiliated societies. Papers may be written in either English or French. Abstracts in both English and French are required for papers and, if not submitted by the author, will be prepared by the Journal at a nominal cost to the author or the institution.

CONTENT. We welcome manuscripts in the fields of animal, plant and soil science that contain new information of national or international interest and application. In addition to full articles, review papers are published by invitation. *Letters to the Editor* may explain, amplify, or otherwise comment upon research published in the Journal.

SUBMISSION OF MANUSCRIPT. Submit all new manuscripts (the original and two photocopies or carbon copies) to the Editor of the Journal. (See inside front cover.)

PAGE CHARGE. A charge of $33.00 per published page plus charges for illustrations and tables will apply to all manuscripts. Reprints will be available at a nominal cost; quotations will be sent with proof. Authors are charged for excessive changes in proof.

THE MANUSCRIPT

Full-Length Papers

GENERAL. Follow the Journal format. For style detail, follow *CBE Style Manual* (third edition, 1972) available from Amer. Inst. Biol. Sci., Washington. D.C. *Webster's Third New International Dictionary* should be consulted for acceptable spelling. Authors are urged to have one or more colleagues read the manuscript *critically* prior to submission.

TITLE. No italics, abbreviations, or authorities should appear in the title. Keep the title brief but include descriptive words to aid information retrieval. The title should reflect all the important aspects of the article.

ABSTRACT. Abstract ordinarily should not exceed 200 words and should be shorter for *Notes*. See *CBE Style Manual* (latest edition) for content.

ORGANIZATION OF TEXT. The body of most papers should be divided into INTRODUCTION, MATERIALS AND METHODS, RESULTS, DISCUSSION, ACKNOWLEDGMENTS, and REFERENCES. For subheadings see *Guidance to Secretaries*. Use footnotes only to identify author's institution or for explanatory comment for tables.

ENUMERATION AND MEASUREMENT. Use numerals whenever a number is followed by a standard unit of measurement: e.g., 1 g, 9 days; otherwise, use words through nine and numerals for larger numbers. See *CBE Style Manual* for exceptions when describing a series of numbers. Report all data in metric units.

ABBREVIATIONS. For commonly used terms, consult the *CBE Style Manual*. Some terms may be spelled out with the abbreviated form following in parentheses the first time it appears in the article.

NAMES AND TERMS. Underline scientific names of organisms and include authorities only for organisms actually used in the investigation. Use cultivars for agronomic or horticultural varieties. Single quotes are used to enclose the name of the cultivar only when it follows the botanical name. Animal and plant species may be defined by common names rather than Latin names. Pesticides should be listed by their approved common names. If a common name is not available, the chemical name should be given.

STATISTICS. The statistical design should be briefly and clearly described. Data should be analyzed and summarized by appropriate statistical methods. A measure of variability (standard error or standard deviation of a mean) is a minimum requirement when reporting quantitative data. Consult the *CBE Style Manual* for further detail.

REFERENCES. Cite only literature that is highly pertinent; avoid multiple citations. Check each reference with the original article and refer to it in the text by the author and date. Use "et al." when there are more than two authors but give all authors in the references. Include in references articles that are "in press" (name journal and anticipated date of publication) but incorporate in text "manuscript in preparation," "unpublished observations," and "personal communication."

Refer to *BIOSIS* (current issue) *List of Serials with Title Abbreviations* (Bioscience Information Service of Biological Abstracts, 211 Arch Street, Philadelphia, Pa. 19102) for accepted abbreviations for journals; only these may be used.

Double-check accuracy of all pages and volume numbers and dates.

TABLES. Study carefully the appropriate section in the *CBE Style Manual*. Suitable statistical statements on estimates of reliability should be included when quantitative data is shown. Denote footnotes using symbols recommended by *CBE Style Manual*. Tables must be numbered, have a brief title, and be referred to in the text. Vertical lines are not accepted.

FIGURES. Number all figures consecutively and give each one a descriptive legend (see *CBE Style Manual*). Figures should be planned to fit the proportions of the printed page. Lettering on drawings should be made with a printing device or rub-on lettering. Drawings should be made with india ink on tracing linen or bristol board.

PHOTOGRAPHS. Photographs should be glossy prints with strong contrasts, trimmed to show essential features, and one set mounted. Two additional sets that have not been mounted should be included. Figures and photographs should be identified with author's name and the figure number on the back side.

Notes

Notes are open to short preliminary reports of important findings. They might contain research results that are complete but characterized by a rather limited area or scope of investigation, descriptions of new cultivars, descriptions of new or improved techniques or equipment including data on performance. Consult a recent issue of the Journal for format. Illustrative material should be kept to a minimum, usually not more than one table or figure. Abstracts are obligatory, shall be in the same language as the note and shall be no longer than 50 words. Standard format for descriptions of new cultivars may be obtained from the Agricultural Institute of Canada.

GUIDANCE TO SECRETARIES

The final draft of the manuscript, the one mailed to the Journal Editor, should contain few, if any, corrections. Before beginning the final typing, it is suggested that you study the *Notice to Authors* and also inspect the Journal itself. Use a copy of the Journal as a guide where there is doubt about how certain details should be typed or set out. Particularly note layout of tables and figures.

Use line-numbered manuscript paper. Type double-spaced throughout, including tables, captions, and legends. Submit three copies on 21.6 × 27.9-cm paper, each page numbered: text, then references, legends, and tables.

Be sure the author checks the finished manuscript.

Some Points to Note

HEADINGS. Title of paper and main headings are all capitalized and centered on page. Subheadings are as follows: first subheadings, flush left, separate line, capitalize main words; second subheadings, flush left, same line as text, capitalize first word, follow by period; third subheadings, flush left, same line as text, capitalize first word, underline, follow by dash.

SPECIAL PUNCTUATION. Period after et al. (not underlined); no comma between author's(s') name(s) and year in text; no period after title of table.

REFERENCES. Type all authors, surnames first (all capitalized), followed by initials.
